

Lesson 6.2 Representing Functions Day 1

Week 1 Monday Course 3 Warm-up

Jenny purchased 26 magazines for her project research at a total cost of \$134. The art related magazines cost \$4 each, while the science related magazines cost \$7 each. Find the number of art related magazines and science related magazines purchased.

Finding Functions

1) Which table DOES NOT represent a function?

A)

x	y
0	5
1	6
2	7
-1	4

C)

x	y
0	0
1	2
2	4
-1	2

B)

x	y
0	5
1	6
2	7
2	4

D)

x	y
0	0
1	3
2	6
-1	0

Calculate the missing length X. Round to nearest tenth

Lesson 6.2 Representing Functions Day 1

Jenny purchased 26 magazines for her project research at a total cost of \$134. The art related magazines cost \$4 each, while the science related magazines cost \$7 each. Find the number of art related magazines and science related magazines purchased.

Let the number of art magazines be x and the number of science magazines be y .

$x + y = 26$ — Eq. 1

$4x + 7y = 134$ — Eq. 2

Use Eq. 1 to express x in terms of y :
 $x = 26 - y$

Substitute Eq. 3 into Eq. 2:
 $4(26 - y) + 7y = 134$
 $104 - 4y + 7y = 134$
 $104 + 3y = 134$

$$104 + 3y - 104 = 134 - 104$$

$$3y = 30$$

$$\frac{3y}{3} = \frac{30}{3}$$

$$y = 10$$

— Eq. 3 Substitute 10 for y into Eq. 3:
 $x = 26 - 10$
 $x = 16$
 Jenny purchased 16 art magazines and 10 science magazines.

Finding Functions

Which table DOES NOT represent a function?

A)

x	y
0	5
1	6
2	7
-1	4

C)

x	y
0	0
1	2
2	4
-1	2

✓ B)

x	y
0	5
1	6
2	7
2	4

D)

x	y
0	0
1	3
2	6
-1	0

Calculate the missing length X. Round to nearest tenth

$$20^2 = 16^2 + x^2$$

$$400 = 256 + x^2$$

$$400 - 256 = 256 + x^2 - 256$$

$$144 = x^2$$

$$x = \sqrt{144}$$

$$x = 12$$

Lesson 6.2 Representing Functions Day 1

Objective

TSW represent a function in different forms including...

*Tables

***Algebraic Equation**

***Graphs**

▶ A function is a relation between a set of inputs and a set of outputs, in which every input has exactly one output. You can use tables, graphs, and equations to represent many functions.

Common Core State Standards

8F1 Understand that a function is a rule that assigns to each input exactly one output. 8F4 Construct a function to model a linear relationship between two quantities 8F5 Describe qualitatively the functional relationship between two quantities by analyzing a graph...

Lesson 6.2 Representing Functions Day 1

Janice plans to enroll in a Spanish class at a language school. She has to pay a registration fee of \$100 plus \$20 for each hour-long lesson she takes. The relation between the total amount she pays and the number of hours of lessons she takes is a function.

Equation

Table

Lesson 6.2 Representing Functions Day 1

Janice plans to enroll in a Spanish class at a language school. She has to pay a registration fee of \$100 plus \$20 for each hour-long lesson she takes. The relation between the total amount she pays and the number of hours of lessons she takes is a function.

Equation

Total amount she pays equals

\$100 registration fee plus \$20 times the **number of hours** she takes lessons.

You can translate this verbal description of a function into an algebraic equation.

Let x be the number of hours.

Let y be the total amount of fees.

$$y = 100 + (20 \cdot x)$$

Write an equation.

$$y = 100 + 20x$$

Simplify.

x is the **input** and
 y is the **output** of
the function.

Table

x	0	1	2	3
y	100	120	140	160

$$\begin{aligned}y &= 100 + 20(0) \\ &= 100\end{aligned}$$

$$\begin{aligned}y &= 100 + 20(1) \\ &= 120\end{aligned}$$

$$\begin{aligned}y &= 100 + 20(2) \\ &= 140\end{aligned}$$

$$\begin{aligned}y &= 100 + 20(3) \\ &= 160\end{aligned}$$

Lesson 6.2 Representing Functions Day 1

Ordered Pairs

Graph

Lesson 6.2 Representing Functions Day 1

Ordered Pairs

The table of values can be used to write ordered pairs:
 $(0, 100)$, $(1, 120)$, $(2, 140)$, and $(3, 160)$.

Graph

Lesson 6.2 Representing Functions Day 1

Guided Practice

Complete.

- 1** A game shop rents out video games at a rate of \$6 per game. The total amount of money the shop collects, y dollars, is a function of the number of games, x , that the shop rents out.
- a)** Write a verbal description of the function. Then write an algebraic equation for the function.

Total amount of money the shop collects equals product of the rental rate and the ?.

 ? = $6 \cdot$? Write an equation.

 ? = ? Simplify.

Lesson 6.2 Representing Functions Day 1

- b) Construct a table of x - and y -values for the function.

x	1	2	3
y	6	?	?

- c) Use the table of values in **b)** to graph the function. Use 1 unit on the horizontal axis to represent 1 game for the x interval, and 1 unit on the vertical axis to represent \$6 for the y interval.

In this situation, only whole numbers make sense for the input and output of the function.

Lesson 6.2 Representing Functions Day 1

Guided Practice

Complete.

1 A game shop rents out video games at a rate of \$6 per game. The total amount of money the shop collects, y dollars, is a function of the number of games, x , that the shop rents out.

a) Write a verbal description of the function. Then write an algebraic equation for the function.

Total amount of money the shop collects equals product of the rental rate and the ? **number of games rented**

? = $6 \cdot$? Write an equation. **$y; x$**

? = ? Simplify. **$y; 6x$**

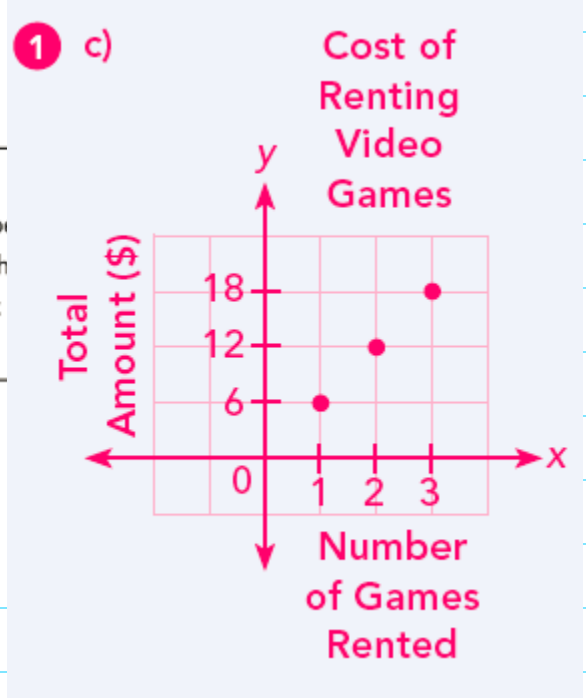

b) Construct a table of x - and y -values for the function.

x	1	2	3
y	6	<u>?</u>	<u>?</u>

12; 18

In this situation, only whole numbers make sense for the input and output the function.

c) Use the table of values in b) to graph the function. Use 1 unit on the horizontal axis to represent 1 game for the x interval, and 1 unit on the vertical axis to represent \$6 for the y interval. **See margin.**

Lesson 6.2 Representing Functions Day 1

- 2 A fire sprinkler sprays water at a rate of 8 gallons per minute. The total amount of water being sprayed, y gallons, is a function of the number of minutes, x , that the sprinkler sprays water.

Lesson 6.2 Representing Functions Day 1

2 A fire sprinkler sprays water at a rate of 8 gallons per minute. The total amount of water being sprayed, y gallons, is a function of the number of minutes, x , that the sprinkler sprays water.

a) Write a verbal description of the function. Then write an algebraic equation for the function.

Total amount of water being sprayed equals product of the rate of water flow and the ?. **number of minutes**

? = ? · ? Write an equation. **$y; 8; x$**

? = ? Simplify. **$y; 8x$**

b) Construct a table of x - and y -values for the function.

x	1	2	3
y	<u>?</u>	<u>?</u>	<u>?</u>

8; 16; 24

The quantities in this situation, time and volume, are continuous.

c) Use the table of values in b) to graph the function. Use 1 unit on the horizontal axis to represent 1 minute for the x interval, and 1 unit on the vertical axis to represent 8 gallons for the y interval. **See margin.**

Lesson 6.2 Representing Functions Day 1

Practice 6.2 #1-7

Challenge-

*Solve created equations

“Pick a Snowflake”

*Real World Problem (website)

*BuzzMath

Name: _____ Date: _____

Practice 6.2

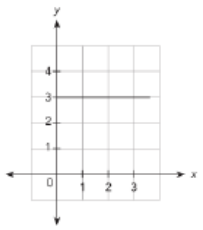

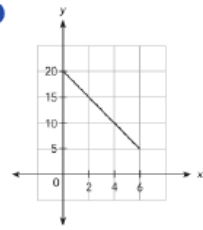

Write a verbal description of each function. Then write an algebraic equation for the function.

- 1 Gordon is traveling at a constant speed of 80 kilometers per hour. The distance he travels, d kilometers, is a function of the amount of time he takes to travel, t hours.
- 2 Mr. Henderson pays a monthly charge of \$40 for a family cell phone plan. Each additional family member pays \$10 every month. The total amount Mr. Henderson and his family members pay each month, y dollars, is a function of the number of the additional family members who use the plan, x .
- 3 *Math Journal* In questions 1 and 2, tell whether all values for the input and output are meaningful for the functions. Explain.

Write an algebraic equation for each function. Then construct a table of x - and y -values for the function.

- 4 The students from the Robotics Club are making model windmills for a workshop. Each windmill has three blades. The total number of blades needed, y , is a function of the number of windmills they make, x .
- 5 A newly made glass vase has a temperature of 580°C . Its temperature then decreases at an average rate of 56°C per minute. The temperature of the glass vase, $y^{\circ}\text{C}$, is a function of the number of minutes its temperature has been decreasing, x .

Each of the following graphs represents a function. Write an algebraic equation to represent the function.

- 6 
- 7 

Course 3

Lesson Check #1 & 7- can represent a function as an algebraic equations

Ticket Out the Door- Connect, Extend, Challenge

1. How are the ideas and information presented **CONNECTED** to what you already knew?
2. What new ideas did you get that **EXTENDED** or pushed your thinking in new directions?
3. What is still **CHALLENGING** or confusing for you to get your mind around? What questions, wonderings or puzzles do you now have?
